

DISCOVERY PHASE

Empathy Map & Stakeholder Experience

Medical Diagnosis Center by ServiceNow Service Portal

Date	06-10-2026	Project Phase	Stakeholder & User Discovery
Platform	ServiceNow	Version	1.0

1. Purpose of the Empathy Map

The empathy map captures the needs, expectations, concerns, and experience of the people involved in the Medical Diagnosis Center process. It is used to understand the human side of the healthcare-service workflow before finalizing ServiceNow configuration and automation.

The stakeholder set for this project consists of Patients / Service Requesters, Healthcare / ServiceNow Administrators, Doctors / Healthcare Professionals, Laboratory / Diagnostic Team members, and Approvers / Authorized Staff.

2. Stakeholder Landscape

Stakeholder	Role	Needs / Expectations	Impact of Automation
Patients / Service Requesters	Patients using the Service Portal for medical and diagnostic services.	Simple, intuitive service submission Fast coordination Status visibility	Faster service coordination Better visibility through ServiceNow portal
Healthcare / ServiceNow Administrators	Manage ServiceNow configuration, workflows, access, and notifications.	Reliable automation Minimal manual intervention Easy change management	Reduced support workload Easier maintenance and updates
Doctor / Healthcare Professional	Reviews and handles assigned patient service requests.	Complete information Clear assignments Standardized process	Structured task assignment Reduced clarification effort More time for patient-facing work
Laboratory / Diagnostic Team	Processes diagnostic service requests and updates task status.	Complete diagnostic data Clear fulfillment tasks Standardized workflow	Automated task generation Reduced clarification effort Better coordination
Approvers / Authorized Staff	Review requests where approval or controlled assignment is required.	Policy compliance Quick, informed decisions Clear context	Structured approval routing Better audit trails Faster decisions

3. Empathy Map — Patients / Service Requesters

Perspective: Patients using the ServiceNow Service Portal to request medical and diagnostic services.

SAYS "I need to submit my request quickly." "Where is my appointment or diagnostic request now?"	THINKS "Have I provided everything required?" "Who is handling my request?"	DOES Submits a medical or diagnostic request through the Service Portal. Checks request/appointment status and waits for service completion.
FEELS Wants a simple process, timely service coordination, and confidence that the request is progressing.	PAINS Complex or unclear service submission. Limited status visibility. Waiting for appointment/service fulfillment.	GAINS Simple guided submission. Faster service coordination. Clear visibility through ServiceNow.

4. Empathy Map — Healthcare / ServiceNow Administrators

Perspective: Manage ServiceNow configuration, workflows, access controls, notifications, and service processes.

SAYS "The workflow should be reliable." "Changes should be easy to maintain."	THINKS "Can this automation be supported without excessive manual intervention?" "Are configuration and access changes controlled?"	DOES Manages ServiceNow configuration, workflows, roles, ACLs, notifications, and updates.
--	--	--

FEELS Wants predictable automation and manageable change processes.	PAINS Manual support workload. Maintenance effort. Complex or fragile automation.	GAINS Reduced support workload. Reliable automation. Easier maintenance and updates.
---	---	--

5. Empathy Map — Doctor / Healthcare Professional

Perspective: Healthcare professional who reviews and handles assigned patient service requests.

SAYS “Give me complete patient-service information.” “I need clear tasks and assignment details.”	THINKS “Is the request complete and properly routed?” “Do I have everything needed to handle this service?”	DOES Reviews assigned patient requests, performs the appropriate professional activity, and updates task/request status.
FEELS Wants fewer repetitive clarification tasks and more time for professional healthcare work.	PAINS Incomplete information. Manual coordination. Unstandardized requests. Risk of human error in administrative handling.	GAINS Automated task generation. Standardized process. Reduced administrative error. More time for patient-facing work.

6. Empathy Map — Laboratory / Diagnostic Team

Perspective: Team members who process diagnostic service requests and update diagnostic task status.

SAYS “I need complete diagnostic request information.” “The task should clearly tell me what is required.”	THINKS “Is the request complete and properly authorized?” “Do I have everything needed to process it?”	DOES Reviews diagnostic requests, performs assigned diagnostic-service activities, and updates task/request status.
FEELS Wants fewer repetitive clarification tasks and a predictable diagnostic workflow.	PAINS Incomplete information. Manual tasks. Unstandardized requests. Coordination delays.	GAINS Automated task generation. Standardized process. Reduced coordination effort. More time for diagnostic work.

7. Empathy Map — Approvers / Authorized Staff

Perspective: Authorized healthcare or administrative staff responsible for reviewing requests where approval or controlled assignment is required.

SAYS “I need enough information to approve this.” “Requests should follow policy.”	THINKS “Is this request appropriate and complete?” “Has the correct approval path been followed?”	DOES Reviews requests and provides approval, rejection, or routing decisions according to defined rules.
FEELS Wants quick, informed decisions with confidence in the process.	PAINS Manual routing. Incomplete context. Difficulty tracking pending approvals.	GAINS Structured approval routing. Policy enforcement. Better audit trails. Faster decision workflow.

8. Cross-Stakeholder Insight Map

Shared Need	Stakeholders Affected	ServiceNow Response	Expected Experience
Simple, structured request	Patients + Healthcare Teams	Service Catalog + guided form	Less ambiguity
Complete information	Patients + Doctors + Diagnostic Team	Mandatory/conditional fields and validation	Fewer clarification cycles

Shared Need	Stakeholders Affected	ServiceNow Response	Expected Experience
Controlled decisions	Approvers + Administrators	Approval routing + Flow Designer	Predictable governance
Less manual coordination	Administrators + Healthcare Teams	Automated workflow and task creation	Lower repetitive workload
Status visibility	Patients + all stakeholders	Request/task/appointment lifecycle tracking + notifications	Greater transparency
Traceability and access control	Approvers + Administrators	Records, approvals, roles and ACLs	Better auditability and controlled access

9. Empathy-to-Solution Mapping

The empathy findings are translated into solution priorities so that each ServiceNow capability has a clear user or operational reason.

Empathy Insight	Design Response	ServiceNow Capability
Patient wants simplicity	Guided request experience	Service Portal / Service Catalog / Catalog Item
Patient wants visibility	Lifecycle status and notifications	Request/RITM tracking + Notifications
Doctor wants informed work	Structured task context and assignment	Flow Designer / fulfilment task
Diagnostic team wants complete data	Standardized diagnostic request fields	Catalog variables + validation
Approver wants informed decisions	Structured approval context	Approval routing / Flow Designer
Administrator wants maintainability	Low-code orchestration and controlled configuration	Flow Designer + Roles + ACLs
Organization needs controlled access	Role separation and data protection	Roles + ACLs

10. Empathy Map Outcome

- Primary user experience priority: make medical and diagnostic service requests simple, guided, and visible.
- Operational priority: provide doctors and diagnostic teams with complete and standardized request information.
- Governance priority: give Approvers and administrators a structured decision path with traceability and controlled access.
- Administration priority: use reliable, maintainable automation with minimal manual intervention.
- Overall design direction: connect the human needs of each stakeholder to a single ServiceNow healthcare-service lifecycle.
