

PROBLEM–SOLUTION FIT ANALYSIS

Medical Diagnosis Center by ServiceNow Service Portal • 06 October 2026

Purpose: validate whether the implemented Medical Diagnosis Center workflow addresses the demonstrated diagnostic-service booking and report-access problem.

PURPOSE / VISION

Connect diagnostic-test discovery, patient details, scheduling, payment, appointment tracking and report availability into one traceable ServiceNow Service Portal journey.

IMPLEMENTATION SNAPSHOT

Area	Project Element	ServiceNow Context
PORTAL	Medical Test Catalog	ServiceNow Service Portal
CATALOG	Diagnostic Test	Diagnostic-test catalogue and records
BOOKING	Book Now → Details → Schedule → Payment → Done	Appointment booking journey
DATA	Patient / Diagnostic Test / Appointment / Report	Structured ServiceNow records
TRACKING	My Appointments	Patient-facing appointment visibility
AUTOMATION	Appointment Complete → Create Report	Configured appointment-completion automation
REPORTING	My Lab Reports	Patient-facing report availability

FILLED PROBLEM–SOLUTION FIT ANALYSIS

No.	Canvas Section	Project-Specific Findings	Implementation Evidence / Validation
1	Customer Segment(s)	Primary: patients who browse diagnostic tests and book appointments. Supporting users: diagnostic-center staff who manage Patient, Diagnostic Test, Appointment and Report records. ServiceNow administrators maintain the portal, tables and automation.	Medical Test Catalog, booking journey, My Appointments and My Lab Reports provide the patient-facing experience; the Patient, Diagnostic Test, Appointment and Report structures provide the operational data layer.
2	Jobs-to-be-Done / Problems	Find a required diagnostic test, understand the test offering, enter patient details once, select a suitable schedule, complete the configured payment step, receive an appointment record, track the appointment and access the laboratory report after completion.	The screenshot-supported journey connects catalog browsing, Book Now, Details, Schedule, Payment, Done, Appointment, My Appointments, appointment completion, Report creation and My Lab Reports.
3	Triggers	A patient needs a diagnostic test and wants to book an appointment; an appointment reaches completion and requires the corresponding report record to become available.	The portal exposes diagnostic tests for booking, while the appointment-completion automation provides the transition to report creation.
4	Experience: Before / During / After	Before: patient needs a diagnostic test. During: selects a test, chooses Book Now, enters details, schedules and completes the configured payment step. After: views the appointment in My Appointments; once the appointment is completed, the resulting report is available through My Lab Reports.	The screenshots show the patient-facing catalog, booking screens, My Appointments and My Lab Reports, plus the Appointment/Report data and completion automation.
5	Available Solutions / Current Approaches	Manual booking and fragmented communication can separate test discovery, patient information, appointment scheduling and report access. The ServiceNow implementation provides one connected portal journey for these activities.	ServiceNow Service Portal components, structured tables and appointment-completion automation connect the demonstrated stages.
6	Customer Constraints	The booking experience must be understandable; patient details must be captured consistently; schedule and payment information must be handled correctly; appointment and report visibility must reflect the underlying record state.	The demonstrated portal flow separates Details, Schedule and Payment stages and exposes appointment/report information through dedicated portal pages.
7	Behaviour	Patient opens Medical Test Catalog → selects a diagnostic test → Book Now → Patient Details → Schedule → Payment → Done. The booking creates an Appointment record; My Appointments shows the appointment. On appointment completion, the configured automation creates a Report record and My Lab Reports exposes the report.	This is the master workflow used for the updated documentation and is based on the previously supplied screenshot PDF.
8	Channels of Behaviour	Primary: ServiceNow Service Portal and its Medical Test Catalog, Appointment Booking, My Appointments and My Lab Reports components. Operational: Patient, Diagnostic Test, Appointment and Report records. Administrative: ServiceNow configuration and automation views.	The screenshot PDF contains the corresponding portal pages and record/configuration evidence.
9	Problem Root Cause	Diagnostic-service booking can become fragmented when test selection, patient details, scheduling, payment, appointment tracking and report access are handled separately. Manual report-record creation after appointment completion can also introduce delay or inconsistency.	The implemented workflow connects the stages and uses appointment completion to trigger report creation.
10	Your Solution	A ServiceNow Medical Diagnosis Center with Medical Test Catalog, Book Now booking, Patient Details, Schedule, Payment, Done, Appointment records, My Appointments, appointment-completion report creation, Report records and My Lab Reports.	The implementation should be evidenced through the configured portal pages, Patient/Diagnostic Test/Appointment/Report records, appointment completion automation and end-to-end testing.

PROBLEM–SOLUTION FIT EVALUATION

Fit Dimension	Assessment	Evidence / Rationale
Customer–Problem Fit	Aligned	The patient-facing journey directly addresses fragmented diagnostic-test selection, booking, appointment tracking and report access.
Problem–Behaviour Fit	Aligned	Observed sequence: Medical Test Catalog → Book Now → Details → Schedule → Payment → Done → My Appointments → Appointment Completed → Report → My Lab Reports.

Fit Dimension	Assessment	Evidence / Rationale
Problem–Constraint Fit	Controlled	The design uses structured ServiceNow records and dedicated portal components; correctness of patient data, scheduling, payment configuration and access remains important.
Solution–Problem Fit	Aligned	Catalog addresses test discovery; booking addresses appointment creation; My Appointments addresses tracking; completion automation and My Lab Reports address report availability.
Scope Fit	Controlled	The current evidence supports the demonstrated diagnostic-service booking and report workflow. Autonomous clinical diagnosis, treatment decisions and unsupported external integrations are not claimed.

FINAL PROBLEM–SOLUTION FIT STATEMENT

The Medical Diagnosis Center demonstrates practical problem–solution fit when the implemented ServiceNow portal connects diagnostic-test discovery and booking with patient details, scheduling, payment, appointment tracking and report availability. The Medical Test Catalog provides the entry point; the Book Now journey creates the appointment context; My Appointments provides visibility; appointment completion triggers report creation; and My Lab Reports provides access to the resulting report record.

CURRENT IMPLEMENTATION BOUNDARY

Boundary	Scope
DEMONSTRATED / CURRENT	Medical Test Catalog; diagnostic test selection; Book Now; Patient Details; Schedule; Payment; Done; Appointment record; My Appointments; appointment-completion automation; Report record; My Lab Reports; Patient and Diagnostic Test data.
NOT CLAIMED AS IMPLEMENTED	Direct hospital/EMR/LIS integration; real external payment-gateway settlement unless separately implemented; SMS/WhatsApp integration; automated clinical diagnosis or treatment decisions; AI clinical interpretation; predictive clinical analytics; and other capabilities not demonstrated in the screenshot evidence.

CURRENT LIMITATIONS / FUTURE VALIDATION

- Test multiple diagnostic-test selections and confirm that patient details, schedule and payment fields persist correctly.
- Validate appointment creation and My Appointments visibility for different appointment states.
- Complete an appointment and verify that the configured automation creates the corresponding Report record.
- Validate My Lab Reports visibility and confirm that report records are linked to the appropriate patient/service context.
- Validate role and access behaviour for patient-facing and operational records.
- Validate any real payment integration separately if an external payment gateway is introduced; the current screenshots establish a payment step, not an external settlement integration.
- Do not claim clinical diagnosis, treatment decisions or clinical interpretation as part of the administrative ServiceNow workflow.

MASTER IMPLEMENTED WORKFLOW

Medical Test Catalog → Select Diagnostic Test → Book Now → Patient Details → Schedule → Payment → Done → Appointment Record → My Appointments → Appointment Completed → Auto Create Report on Appointment Complete → Report Record → My Lab Reports
