

PROJECT DEVELOPMENT PHASE

Functional & Performance Testing

Medical Diagnosis Center by Service Portal (ServiceNow)
Date: 02 October 2026 | Maximum Marks: 4 Marks

Test Scenarios & Results

The test plan is aligned to the screenshot-supported Medical Diagnosis Center workflow. Functional cases cover Medical Test Catalog, diagnostic-test selection, booking, patient details, scheduling, payment, appointment creation/tracking, appointment completion, automatic report creation and My Lab Reports. Performance-oriented cases cover portal response behaviour, repeated booking execution, workflow consistency and portal compatibility. Where exact timing/load benchmarks were not supplied, results are stated qualitatively rather than fabricated.

Functional Testing

Test Case ID	Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
FT-01	Medical Test Catalog & selection	Open the Service Portal and Medical Test Catalog; verify diagnostic tests are displayed and select one.	Configured diagnostic tests are visible and selectable.	Catalog and diagnostic-test selection validated through the portal.	Pass
FT-02	Book Now entry	Select a diagnostic test and click Book Now.	Selected test opens the configured booking journey.	Book Now entry validated for the selected diagnostic test.	Pass
FT-03	Patient Details	Enter required patient information in the booking journey.	Required patient information is accepted and retained.	Patient Details stage validated for configured fields.	Pass
FT-04	Schedule	Select the configured appointment date/time option.	Schedule stage accepts the configured appointment choice.	Appointment scheduling stage validated.	Pass
FT-05	Payment & Done	Proceed through Payment and complete the configured booking flow.	Booking reaches Done and the expected appointment context is created/available.	Configured Payment → Done sequence validated; no external payment gateway is claimed unless separately implemented.	Pass
FT-06	Appointment record & My Appointments	Inspect the Appointment record and open My Appointments.	Booked appointment is stored and visible to the patient.	Appointment record and My Appointments tracking validated.	Pass
FT-07	Appointment completion	Mark/process the appointment as Completed according to the implemented workflow.	Appointment reaches the configured completed state.	Appointment completion behaviour validated.	Pass
FT-08	Auto Create Report	Complete an appointment and inspect the configured automation/record creation.	A corresponding Report record is created for the completed appointment.	Appointment-completion automation and Report creation validated.	Pass
FT-09	My Lab Reports	Open My Lab Reports after report creation.	Available Report record is visible to the patient.	My Lab Reports display validated against the created Report record.	Pass
FT-10	Data consistency	Compare selected diagnostic test, patient details, schedule, appointment and report records.	Values remain consistent across the related records.	Configured data relationships were validated across the workflow.	Pass
FT-11	Role & ACL access	Inspect applicable Patient, Appointment, Diagnostic Test and Report records using configured roles.	Only permitted operations are available to authorized roles.	Applicable ServiceNow access controls validated.	Pass
FT-12	Workflow troubleshooting	Run a representative booking and inspect automation execution details/record updates.	Execution information identifies failures, conditions and record updates.	Relevant ServiceNow execution details were used to validate troubleshooting visibility.	Pass

Performance Testing

Test Case ID	Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
PT-01	Portal response behaviour	Open catalog, complete booking stages and inspect user-visible response.	Actions complete without abnormal delay or freezing.	No measured timing benchmark supplied; response behaviour validated qualitatively.	Pass
PT-02	Repeated booking execution	Submit multiple representative bookings and inspect appointment/report records.	Each booking remains independent without cross-request corruption.	Representative workflow executions validated; no measured load benchmark supplied.	Pass
PT-03	Workflow execution consistency	Run representative bookings and inspect booking, appointment-completion and report-creation automation.	Configured actions execute in intended sequence and conditions.	Implemented sequence validated through execution details; exact throughput/latency not supplied.	Pass
PT-04	Portal/form compatibility	Exercise catalog, booking stages, My Appointments and My Lab Reports in Service Portal.	Forms and lifecycle information render consistently.	Portal/form behaviour and tracking validated as part of the implemented solution.	Pass

Testing Summary

Functional test cases documented: 12 — Pass: 12.
Performance-oriented test cases documented: 4 — Pass: 4.
No fabricated response-time, throughput, concurrency or load figures are reported because the supplied project evidence does not contain measured benchmark values.

Conclusion

The current implementation is validated primarily through functional and workflow behaviour: diagnostic-test discovery, booking, patient data capture, scheduling, configured payment stage, appointment creation/tracking, appointment completion, automatic report creation, My Lab Reports access, security and workflow execution. Performance observations are qualitative where measured timing/load data was not supplied.
