

PROJECT DEVELOPMENT PHASE

User Acceptance Testing (UAT)

Medical Diagnosis Center by Service Portal (ServiceNow)
Date: 02 October 2026 | Maximum Marks: 4 Marks

Project Overview

Item	Details
Project Name	Medical Diagnosis Center by Service Portal (ServiceNow)
Project Description	A ServiceNow-based Medical Diagnosis Center workflow that lets a patient discover a diagnostic test, select it, start Book Now, provide Patient Details, choose a Schedule, complete the configured Payment stage, finish the booking, view the Appointment in My Appointments, and access a Report created after Appointment Completed through My Lab Reports.
Project Version	Academic / Project Prototype
Testing Period	Project UAT cycle – final development/testing phase

Testing Scope

- Medical Test Catalog and diagnostic-test selection.
- Book Now entry into the appointment journey.
- Patient Details capture and configured form validation.
- Schedule selection and appointment creation.
- Configured Payment stage and Done completion.
- My Appointments visibility and appointment status tracking.
- Appointment Completed transition.
- Automatic Report creation triggered by appointment completion.
- My Lab Reports visibility.
- Roles and ACL-based access to applicable Patient, Appointment and Report records.
- End-to-end patient-to-booking-to-appointment-to-report workflow.

Testing Environment

URL/Location: ServiceNow Personal Developer Instance / Service Portal used for the project. Credentials: role-specific test accounts or authorized users as configured in the instance. Passwords are intentionally not included in documentation.

Test Cases

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Open Medical Test Catalog	Open Service Portal → Medical Test Catalog.	Medical Test Catalog opens and configured diagnostic tests are displayed.	Catalog opened successfully and diagnostic tests were available.	Pass
TC-002	Select Diagnostic Test	Select a diagnostic test and click Book Now.	Selected test opens the configured booking journey.	Book Now opened the appointment booking journey for the selected test.	Pass
TC-003	Patient Details	Enter the required patient information.	Required patient details are accepted and retained.	Patient Details stage was validated with configured fields.	Pass
TC-004	Schedule	Select the configured appointment date/time option.	Schedule stage accepts the configured appointment choice.	Configured schedule selection was validated.	Pass
TC-005	Payment & Done	Proceed through Payment and complete the booking.	Booking reaches Done and the expected Appointment context is created/available.	Payment → Done sequence was validated; no external payment gateway is claimed.	Pass
TC-006	Appointment record	Inspect the created Appointment record after booking.	Appointment contains the expected patient, diagnostic-test and schedule context.	Appointment record was validated against the submitted booking information.	Pass
TC-007	My Appointments	Open My Appointments after booking.	Patient can view the booked appointment and configured status.	My Appointments displayed the appointment information.	Pass
TC-008	Appointment Completed	Process/mark the appointment as Completed according to the implemented workflow.	Appointment reaches the configured completed state.	Appointment completion transition was validated.	Pass
TC-009	Auto Create Report	Complete an appointment and inspect the configured automation and Report record.	Corresponding Report record is created for the completed appointment.	Configured appointment-completion automation created the Report record.	Pass
TC-010	My Lab Reports	Open My Lab Reports after report creation.	Authorized patient can view the available Report record.	Created Report was visible through My Lab Reports.	Pass
TC-011	Role & ACL access	Test applicable patient/authorized/admin roles against Patient, Appointment and Report records.	Access is restricted according to configured role/ACL rules.	Configured role/ACL controls were validated.	Pass
TC-012	End-to-end walkthrough	Medical Test Catalog → Diagnostic Test → Book Now → Patient Details → Schedule → Payment → Done → Appointment → My Appointments → Appointment Completed → Auto Create Report → My Lab Reports.	Entire patient service journey works in the correct sequence.	End-to-end workflow was validated through the configured ServiceNow portal, records and automation.	Pass

Bug Tracking

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback / Resolution
BG-001	Booking-stage validation	Execute Book Now → Patient Details → Schedule → Payment → Done and inspect the Appointment record.	Medium	Closed	Booking sequence and Appointment creation were validated.
BG-002	Appointment completion automation	Complete an Appointment → inspect automation execution → inspect Report record.	Medium	Closed	Appointment completion and Report creation were validated.
BG-003	Patient/report data visibility	Open My Appointments and My Lab Reports using the applicable role.	Medium	Closed	Portal visibility and record access were verified.
BG-004	Portal form visibility	Select different diagnostic tests and inspect configured fields.	Low	Closed	Configured catalog/form behaviour was tested.

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback / Resolution
BG-005	End-to-end lifecycle progression	Run the complete diagnostic-test-to-report journey and inspect each stage.	Low	Closed	Lifecycle evidence was reviewed from test selection through report visibility.

Sign-off

Field	Value
Tester Name	_____
Date	_____
Signature	_____
Overall UAT Result	PASS – based on the documented final working workflow and completed UAT scenarios.

Notes

- Test cases should include representative positive and negative inputs.
- Any new issue found after deployment should be added to bug tracking with reproducible steps.
- External laboratory/device API automation, advanced analytics/Power BI/Tableau, AI/ML diagnostic classification and external messaging are future scope unless separately implemented and tested.
- Current UAT evidence validates diagnostic-test selection, booking, patient details, scheduling, configured payment stage, appointment tracking, appointment completion, automatic report creation, My Lab Reports and access configuration.
- Final deployment should proceed only after project owner/evaluator sign-off.
