

PROJECT DEMONSTRATION GUIDE

Medical Diagnosis Center by ServiceNow Service Portal

Workflow-Aligned Version 2.0 • 06 October 2026

This document is aligned to the actual workflow visible in the supplied implementation screenshots. It replaces generic Service Catalog/REQ-RITM/Flow Designer claims that are not evidenced by those screenshots with the demonstrated Medical Diagnostic Test Center portal journey.

1. DEMONSTRATION PURPOSE

The demonstration follows the implemented ServiceNow portal journey from diagnostic-test discovery and booking through patient-data capture, scheduling, payment, appointment completion, appointment tracking and laboratory-report access. The screenshots also evidence the custom Patient, Diagnostic Test, Appointment and Report tables, custom portal widgets/pages and an Appointment-table business rule for report creation.

- Medical Diagnostic Test Center portal
- Diagnostic-test discovery and Book Now
- Details → Schedule → Payment → Done booking
- Appointment record and status
- Appointment-completion report automation
- My Appointments and My Lab Reports
- Custom tables, widgets, portal pages and implementation challenges

2. DEMONSTRATION ARCHITECTURE

Medical Diagnostic Test Center Portal → Medical Test Catalog → Book Now → Appointment Booking (Details → Schedule → Payment → Done) → Appointment Record → Appointment Completion Automation → My Appointments → My Lab Reports.

Supporting data structures: Patient, Diagnostic Test, Appointment and Report. Supporting portal components: Medical Test Catalog, Lab Reports, Appointment Booking and My Appointments.

PORTAL	TEST CATALOG	BOOKING	APPOINTMENT	REPORTS
Medical Diagnostic Test Center	Diagnostic Test	Details	Appointment Table	Lab Reports
Search / All Tests	Book Now	Schedule	Status / Date / Time	My Lab Reports
My Bookings	Test details	Payment	Patient reference	Report Table

3. DEMO PREREQUISITES

Requirement	Demo Readiness Check
ServiceNow Instance	PDI or authorized project instance is active and accessible.
Portal	Medical Diagnostic Test Center portal is available.
Diagnostic Tests	Test catalog contains the configured test cards and Book Now actions.
Patient Data	Use a valid demonstration patient dataset.
Appointment Data	Configured Appointment table and fields are available.
Automation	Appointment completion business rule is available for inspection.
Reports	Report table and My Lab Reports page/widget are available.
Browser	Use a clean browser session for a consistent demonstration.

4. FINAL LIVE DEMONSTRATION FLOW

Step	Phase	Role	Component	Expected Result
1	Portal Entry	Patient / Requester	Medical Diagnostic Test Center portal	User lands on the custom ServiceNow Service Portal home page with search, My Bookings, My Reports and All Tests.
2	Test Discovery	Patient / Requester	Medical Test Catalog widget / test_catalog page	User browses or searches available diagnostic tests and selects Book Now.
3	Patient Details	Patient / Requester	Appointment Booking widget	User enters patient information shown in the implementation: first name, last name, email, phone, date of birth, gender and address.
4	Schedule	Patient / Requester	Appointment Booking	User moves to the Schedule step and selects the appointment details for the chosen diagnostic test.
5	Payment	Patient / Requester	Appointment Booking	User proceeds through the configured Payment step in the booking journey.
6	Completion	Patient / Requester	Appointment Booking	User reaches the Done step and the booking is completed.
7	Appointment Record	Administrator / Operations	APPOINTMENT TABLE	The booking is represented in the custom Appointment table with fields including patient, scheduled date, start/end time, status and rejection reason.
8	Completion Automation	Administrator / Operations	Business Rule — Auto Create Report on Appointment Complete	The screenshots show a Business Rule on the Appointment table intended to automate report creation when an appointment reaches completion.
9	My Appointments	Patient / Requester	my_appointments page / My Appointments widget	User can view appointment history and status; the screenshot shows a completed, approved appointment and a Book New Test action.
10	Lab Reports	Patient / Requester	lab_reports page / Lab Reports widget	User can access diagnostic reports through My Lab Reports; the screenshot shows the report dashboard and its status counters.
11	Diagnostic Data Model	Administrator / Operations	PATIENT / DIAGNOSTIC TEST / REPORT tables	The backend data model separates patient, diagnostic-test, appointment and report information.

4.1 Suggested Narration During the Live Demo

Step 1: "I will start from the Medical Diagnostic Test Center portal, where the user can search tests and access My Bookings and My Reports."

Step 2: "From All Tests, the user selects a diagnostic test and clicks Book Now."

Step 3: "The booking journey first collects patient information such as name, contact details, date of birth, gender and address."

Step 4: "The user then proceeds through the Schedule step, followed by the configured Payment step, and finally reaches Done."

Step 5: "The completed booking is represented in the custom Appointment table, which stores patient and appointment information such as scheduled date, start time, end time and status."

Step 6: "The implementation also contains an Appointment-table business rule named Auto Create Report on Appointment Complete, providing the configured automation point for report creation after appointment completion."

Step 7: "The user can return to My Appointments to view the appointment history and its current status."

Step 8: "The My Lab Reports page provides the user-facing location for diagnostic reports and report status information."

Step 9: "Behind the portal, Patient, Diagnostic Test, Appointment and Report are separated into custom ServiceNow data structures."

5. ROLE-BASED DEMONSTRATION

Role	Key Demo Activities	Main Components
Patient / Requester	Browse diagnostic tests; select Book Now; enter patient details; schedule; complete payment flow; view appointments and reports.	Medical Diagnostic Test Center portal, Medical Test Catalog, Appointment Booking, My Appointments, My Lab Reports
ServiceNow Administrator / Developer	Configure custom tables, widgets, portal pages and business rules; validate data relationships and automation.	Patient, Diagnostic Test, Appointment, Report tables; widgets; business rules; portal pages
Diagnostic / Service Operations	Use appointment and report records for operational processing where authorized.	Appointment and Report data; role-controlled ServiceNow access

6. IMPLEMENTATION / PROBLEMS FACED AND LIVE EXPLANATION

Problem	What Happened	Resolution / Current Configuration	How to Demonstrate
Appointment-to-Report Automation	Report generation depends on the appointment reaching the configured completion state.	Business Rule 'Auto Create Report on Appointment Complete' is configured on the Appointment table.	Show the Business Rule configuration and then show the resulting report/record when available.
Patient / Appointment Data Mapping	Booking information must be represented consistently between the portal booking journey and the Appointment table.	Validated the custom Appointment fields and patient reference.	Compare the patient details entered during booking with the Appointment record.
Portal Widget / Page Flow	The user journey is split across custom widgets and portal pages.	Medical Test Catalog, Appointment Booking, My Appointments and Lab Reports widgets/pages are configured.	Navigate through the actual portal pages in sequence.
Booking Lifecycle	The booking must progress through Details, Schedule, Payment and Done.	The Appointment Booking widget implements the four-step visual journey.	Demonstrate each step and the final completed state.

7. DEMONSTRATION EVIDENCE / SCREENSHOTS

The supplied screenshot PDF contains 21 pages. Pages 17–21 show the user-facing portal and booking/report journey; pages 1–7 show supporting ServiceNow tables and business rules.

- Portal home page
- Medical Test Catalog
- Appointment Booking / Patient Details
- Schedule → Payment → Done
- Appointment table
- Auto Create Report on Appointment Complete
- My Appointments
- My Lab Reports
- Patient / Diagnostic Test / Report tables

8. DEMO VALIDATION CHECKLIST

No.	Validation Item	Status
1	Medical Diagnostic Test Center portal opens successfully.	■ Pass ■ Fail
2	Medical Test Catalog displays diagnostic tests and Book Now actions.	■ Pass ■ Fail
3	Appointment Booking opens for the selected test.	■ Pass ■ Fail
4	Patient information fields accept valid values.	■ Pass ■ Fail
5	Schedule step is reachable from the booking journey.	■ Pass ■ Fail
6	Payment step is reachable and the booking can progress to Done.	■ Pass ■ Fail
7	Appointment record contains the selected patient and configured appointment details.	■ Pass ■ Fail
8	Appointment status reflects the configured lifecycle state.	■ Pass ■ Fail
9	Auto Create Report on Appointment Complete business rule is active/configured.	■ Pass ■ Fail
10	My Appointments displays the user's booking history and status.	■ Pass ■ Fail
11	My Lab Reports page/widget is accessible.	■ Pass ■ Fail
12	Patient, Diagnostic Test, Appointment and Report tables are available in the application.	■ Pass ■ Fail
13	Configured portal pages/widgets are accessible to the intended users.	■ Pass ■ Fail
14	Authorized users can access the required operational records.	■ Pass ■ Fail

9. EVALUATOR QUESTIONS — QUICK ANSWERS

Question	Answer
What is the actual user journey?	Medical Diagnostic Test Center → test selection → Book Now → patient details → Schedule → Payment → Done → My Appointments → My Lab Reports.
Which custom tables are shown?	Patient, Diagnostic Test, Appointment and Report tables are shown in the supplied screenshots.
Which portal components are shown?	Medical Test Catalog, Lab Reports, Appointment Booking and My Appointments widgets/pages are shown.
How is the appointment represented?	The Appointment table contains patient and scheduling information including scheduled date, start time, end time and status.
How is report creation automated?	The screenshots show an Appointment-table business rule named Auto Create Report on Appointment Complete, which is the configured automation point for report creation after completion.
Is the project an autonomous medical diagnosis system?	No. The demonstrated implementation is a diagnostic-service booking and workflow portal. It does not claim autonomous clinical diagnosis or treatment decisions.
Are external hospital/EMR/laboratory integrations shown?	No external integrations are evidenced by the supplied screenshots; they should not be presented as completed functionality.
Is AI/ML clinical decision support shown?	No. The supplied screenshots evidence ServiceNow portal, data tables, widgets/pages and workflow automation, not a trained clinical AI/ML model.

10. FINAL DEMONSTRATION CONCLUSION

The live demonstration should prove the implemented Medical Diagnosis Center portal as an end-to-end diagnostic-service booking and tracking workflow: a user discovers a test, starts a booking, enters patient information, progresses through scheduling and payment, completes the booking, and can then review the appointment and access the laboratory-report area. The ServiceNow backend evidence supports this journey through the Patient, Diagnostic Test, Appointment and Report tables and the configured appointment-completion automation.

The demonstration should use the actual screenshots and live instance evidence rather than claiming unsupported REQ/RITM or Flow Designer actions that are not visible in the supplied implementation screenshots.
